

How to view Online Content on springerlink.

This guideline shall assist you to become familiar with the springerlink Website. On the following pages you find some screenshots and examples..

Please visit www.springerlink.com:

The screenshot shows the SpringerLink website in a Microsoft Internet Explorer browser window. The browser's address bar displays the URL <http://www.springerlink.com/home/main.mpx>. The website's main content area features a navigation menu on the left with options like 'My SpringerLink', 'Marked Items', 'Alerts', 'Order History', 'Saved Items', and 'All Favorites'. The main content area is titled 'Welcome to SpringerLink!' and includes a search bar with the text 'Find content by keyword' and a 'Go' button. Below the search bar, there are two columns of content: 'Content type' and 'Subject'. The 'Content type' column lists various categories such as 'All (3,141,960)', 'Publications (17,810)', 'Journals (1,633)', 'Book Series (726)', 'Books (15,451)', and 'Reference Works (73)'. The 'Subject' column lists various subjects such as 'Architecture, Design and Arts (30)', 'Behavioral Science (75,146)', 'Biomedical and Life Sciences (826,337)', 'Business and Economics (70,086)', 'Chemistry and Materials Science (586,500)', 'Computer Science (271,029)', 'Earth and Environmental Science (299,742)', 'Engineering (357,484)', 'Humanities, Social Sciences and Law (182,782)', 'Mathematics and Statistics (250,002)', 'Medicine (656,823)', and 'Physics and Astronomy (433,336)'. At the bottom of the page, there is a footer with links for 'Frequently asked questions', 'General information on journals and books', 'Send us your feedback', and 'Impressum'. The footer also includes copyright information for Springer and contact details for the server.

INTRODUCTION

This is volume number six in the series entitled "Cellular Origins, Life in Extreme Habitats and Astrobiology (COLE)" <http://www.wkap.nl/prod/s/COLE> (edited by J. Seckbach, published by Kluwer Academic Publishers). It covers possible events in the genesis and evolution of living cells and conditions of life in the universe. Some chapters analyze the essential question of chemical evolution and the "Fact of Life." The subjects covered in this book are among the most frequently discussed in the world of science and at the forefront of scientific frontiers. Indeed, lately numerous books have been published, journals initiated, international conferences and societies organized associated with the aspects of science addressed in this new volume. Several of the chapters in this volume complement and expand studies published in previous volumes of "COLE."

The questions of origins of life and age of Earth and the Universe are not new – earlier generations pondered these interesting, seemingly insolvable puzzles. In some cases, religious faiths continue to consult holy documents about the "Genesis" for answers. The fossil record is seen as contradicting religious traditions, regarding topics such as the times when various forms of life where on the Earth. Or, the radioactive decay of elements that tells something about the age of earth. Some thinkers have tried to bridge the differences in these approaches, and this very topic has stimulated a wide range of ideas. There remain proponents of the "Panspermia" concept who see life "seeds" as having been imported from other planets or from further celestial regions. The ancient martian meteorite AHL84001 collected in Antarctica and meteorites from other sites have been claimed by some to carry a payload of biological traces. Such meteorites represent a ready supply of extraterrestrial material delivered to Earth for study.

The open questions, already addressed in the past, are still unanswered: How did life
