Arama sonuçlarınız “aramanız ile ilgili olma”
durumuna göre sıralanır ve yıldızlar ile
ilgili durum gösterilir.

Aramaları Derecelendirme Sistemi

OvidSP Arayüzü Aramada Derecelendirmeyi Nasıl Yapar

- **5-Yıldız**
 - Aranan bütün kavramlar metin parçasında mevcut ise
- **4-Yıldız**
 - Aranan çoğu kavram metin parçasında mevcut fakat bazıları yok ise.
- **3-Yıldız**
 - Bir kavram mevcut parçasında eksik ise.
- **2-Yıldız**
 - İki kavram metin parçasında eksik ise.
- **1-Yıldız**
 - Metin parçasında iki kavramdan fazla eksik var ise.

Arama sonuçları en çok kavram bulunan metin parçasından yani 5-Yıldızdan düşüğe göre sıralanır.

- 1. *Journals@Ovid Full Text* Roberts, Rosebud O. MD, MS *; Cha, Ruth H. MS +; Knopman, David S. MD ++; Petersen, Ronald C. MD, PhD ++; Rocca, Walter A. MD, MPH * ++
Postmenopausal **Estrogen Therapy** and **Alzheimer Disease**: Overall Negative Findings. [Article.] *Alzheimer Disease & Associated Disorders*. 20(3):141-146, July/September 2006. AN: 00002093-200607000-00004.

An inverse association between **estrogen therapy** (ET) and **Alzheimer disease** (AD) has been reported in some, but not in all studies. We investigated the association between ET and AD in postmenopausal women using a population-based case-control design. Women who developed AD from 1985 through 1989 in Rochester, MN (cases, n=264) were individually matched by age (+/-1 y) to control women free of dementia from the same population (controls, n=264). ET exposure (>=6 mo after menopause) was ascertained by abstracting the complete medical records archived in the records-linkage system of the Rochester Epidemiology Project. The frequency of ET use was similar in cases (11.4%) and controls [10.6%; odds ratio=1.10; 95% confidence interval (CI)=0.63-1.93]. However, cases who used ET had a suggestive trend for an earlier age at start of ET compared with controls (median, 49.0 vs. 50.5 y; P=0.06). Although smoking (ever vs. never) was not associated with AD overall, we observed an interaction between smoking and ET. The odds ratio of AD in ET users was 4.55 (95% CI=1.33-15.53) among smokers, but was 0.68 (95% CI=0.35-1.32) among never-smokers (P for interaction=0.01). Our findings do not confirm a significant association between ET and AD overall; however, the possible interaction with smoking deserves further study.
